### Fencing Bid Specifications

1. All gates added must have a minimum width clearance of 72" for mower access unless the existing opening is already less than 72".
2. We prefer not to impede sidewalks with center posts for double gates. If a post is necessary, we prefer replacing the double gates with a single gate of the maximum possible width.
3. Match the style of fence at each location. If existing is black fencing, new should be black fencing, etc.
4. All fencing added will be 5 feet in height or the height of existing fence, **whichever is higher**. This will result in some 5 foot fencing backing up against shorter fencing, mostly at the Prescott location.
5. New gate posts are to be set in concrete. Fencing run posts are not required to be set in concrete. In some areas, posts may need to be set in existing concrete sidewalk.
6. White Plains Academy fencing will be around the playground on the back side of the school. We need a price listed for each section separately.
  - They will be listed as add options 1 through 6.
  - **Section one will need a panic gate (minimum 72" width) where the fence meets the building.**
